

Representative Viewpoint 15 (Left) - Unclassified lane near Bryn Dyfrydog

Existing View

This view is representative of motorists, cyclists and walkers using the unclassified lane to the north-west of the property at Bryn Dyfrydog adjacent to Maen Hir South 'A'. The foreground to the left comprises the unclassified lane and roadside hedgerows. Bryn Dyfrydog and associated vegetation can be seen in the midground of the left, which in turn foreshorten views beyond. To the centre of the foreground, a large geometric pastoral field is seen above a gappy hedgerow which borders the lane. To the right of the foreground, the lane and hedgerows can be seen before the landform falls away, revealing the property at Refail Neywydd in the midground view. To the centre of the view, pastoral fields sit on gently rolling topography which rises into the middle distance. In the background of the centre left of the view, Pen y Foel can be seen with Llwydiarth Tower on the summit. In the background of the centre right of the view, long distance views to the west are framed by the pockets of woodland near Archer House and Llwydiarth Fawr. Pockets of woodland next to Cae Mawr and Llys Einion also foreshorten the views. To the right of the view, there are glimpsed long distance views of Mynydd-y-Garn and the Llyn Alaw Wind Farm on the skyline.

Operation Phase

Extensive parts of Maen Hir South 'A' are visible to the south of the viewpoint beyond roadside hedgerows. Field 132 (mitigation and enhancement area) forms much of the foreground. To the centre left, much of the eastern side of Maen Hir South 'A' can be seen with Fields 133, 147, 152, 165 and 166 particularly visible. To the centre right of the view, much of the western side of Maen Hir South 'A' can be seen. Field 130 is visible in the midground view whilst Field 131 (mitigation and enhancement) can be seen just ahead of it. To the right of the view, the north-western edge of Maen Hir Central is largely screened by intervening landform and woodland. During the operation phase, the scale of effects are likely to be **Large** (adverse) reducing to a **Medium** (adverse) once the embedded mitigation has established.
